Copy 2 of 7

15 June 1960

MEMORANDUM FOR : Colonel Beerli

SUBJECT :

25X1

25X1
25X1
25X1
1. As you know, is leaving Sunday, 19 June, for where with he will survey existing facilities for possible use in the U-2 Program. Although he has a good deal of experience in CHALICE in setting up overseas facilities, in view of the probable differences between a U-2 Program and a normal CHALICE operation, I would suggest that you may wish to instruct Operations to provide him with some parameters within which to make his decisions. I believe this is especially important in view of the two possible concepts under which this Program might be run: namely, a small unit based in and the alternative which is staging from the States.

25X1

2. Some of the things which occur to me as possible questions where could use guidance are:

25X1

- a. Is the unit under either concept to have a fixed capability for tracker camera film processing?
- b. What provisions should be made for humidity controlled film storage locally and how much film would be stored at any one time?
- c. How much of what area of shop space should be provided?
- d. Do you envision special power requirements?
- e. What provisions should be made for an Ops briefing room or for mission planning space?
- f. Do you foresee special security requirements that will call for fence construction, etc?
- g. What about a special POL storage area?

SECRET

- 2 -

h. Should separate warehouse space be provided for FAK and SLOE items?

i. How firm is the requirement for how much hangar floor space? (I understand this may be a problem area due to over-crowding.)

j. How about pilot prebreathing room and PE storage area?

k. Will there be special commo space and air conditioning requirements?

25X1
25X1
3. You may feel that some of these questions above are inappropriate in the event the staging concept is used, but in view of your own statement that stagings to [] might well run for several months, I wonder if we do not have the same problem as if we were setting up a unit permanently. It also might be well to be able to give [] some over-all estimate of the projected size of the unit under one concept or the other or both so that he can discover whether there are housing problems involved.

25X1
4. [] should be back in the office tomorrow, following his trip to West Virginia, but I believe Friday would be about the last day when we could hope to corner him on this subject.
